About Our Event:

Brief description:

A comprehensive workshop curated and conducted specially for beginners, teaching them how to use Git through command line as well as covering all the important functionalities of Git and Github.

Category: Workshop

Number of participants who registered: 60

Number of participants who participated: 51

Reasons why we chose this event:

Students usually do not take a course that teaches them Git and Github, although these skills are essential for their mini projects or any projects. Without these platforms, it is impossible for them to collaborate and manage their projects.

Registration fee: Free

How was it conducted?
